Dear Hiring Manager,

I am excited to apply for the DevOps Engineer position at CTW. With my experience in software development, infrastructure management, and experience using tools such as Python, Linux, and Git, I am confident in my ability to contribute to the growth and success CTW.

In my current role as a System Validation Engineer at Intel Corporation, I am responsible for post-silicon functional validation of memory controller hardware for Intel Xeon processors. I successfully debugged failures, identified areas for improvement in test content, and developed validation scripts for use in test suites. My attention to detail and ability to collaborate with cross-functional teams ensured the identification of bugs and the improvement of product performance. Furthermore my experience at Intel has made me comfortable working in a fast-paced environment and thrive in an environment with changing requirements and tight deadlines.

In addition to my technical qualifications, I have Japanese language proficiency, which will be beneficial in collaborating with Japanese-speaking stakeholders and coworkers. This versatility allows me to collaborate effectively with development teams and understand their requirements from a broader perspective.

I am excited about the opportunity to contribute my skills and expertise to your team as a DevOps Engineer. I believe that my strong technical background, leadership abilities, and dedication to quality assurance make me an ideal candidate for this position.

Thank you for considering my application. I would welcome the opportunity to discuss how my skills and experience align with your company's needs in more detail. I look forward to the possibility of joining your team and contributing to the success of your web application projects.

Sincerely,
-Michael Hernandez
